SOFTWARE ENGINEER/ANALYST, OSD SERVICES | TRIPOLI-LEBANON

Development and testing for different modules and features for Novopath Laboratory information system (https://www.novopath.com/).

RESPONSIBILITY:

- Responsible for a variety of duties related to the development, enhancement, and delivery of NovoPath's software offerings.
- Develops features across multiple subsystems within NovoPath applications, including collaboration in defining requirements, prototyping, design, coding, testing and deployment.
- Understands how NovoPath's applications operate, are structured, and how customers use them.
- Provides engineering support (when necessary) to technical operations staff when they are building, deploying, configuring and supporting systems for customers.
- Participates with NovoPath teams as needed during the deployment/implementation of products.
- Investigates, analyzes and makes recommendations to management regarding improvements, upgrades and modifications.
- Works with support staff as needed to help solve deeper technical issues faced by clients.
- Reports to a designated Senior Software Engineer or Manager for all technical matters.
- Runs unit test cases to make sure that the code developed meets the specifications provided.
- Troubleshoots and duplicates software bugs reported from testing and support teams.
- Participates in software code reviews and design discussions when invited.
- Follows the Quality Management System (QMS) processes in full.
- Adheres to deadlines and maintains the highest quality standards.
- Maintains accurate time records and timely submits any expense reports.
- Undertakes additional related activities as determined by Management.

For Programming:
* Writes programs using a variety of programming languages per written design specifications.
* Modifies existing company software to add new enhancements and correct bugs.
* Writes documents to describe software changes being made.

For Testing:
* Writes detailed test cases to test all written design specifications.
* Validates exiting software for backwards compatibility after enhancements and bug corrections.
* Writes documents describing test results and all test exceptions.

For Technical Writing:
* Understands the user experience desired from the changes requested.
* Writes detailed step by step and how-to guides for changes being implemented.
* Integrates all new documents into the online manuals currently developed.
* Develops training scripts for specific modules.
